CONSIDERATIONS

This guide was designed to assist you in determining which JAY Seating product will be most appropriate for your client.

Our goal when creating this guide was to show:	
FEATURE:	The materials or design used in the construction of each JAY seating product.
DESIGN INTENT:	The “why” of each component’s inclusion in the design.
CLINICAL VALUE:	The intended clinical outcome of each component’s material make-up and design intent.
COMMON CLIENT CHARACTERISTICS:	Describes the client for whom each product was designed either by clinically determined criteria or by functional needs.
JAY PRODUCT COMPARISON GUIDE:	A score per product that represents the relative ability of the product to address a clinical indication.
TECHNICAL SPECIFICATIONS AND CUSHION SIZE AVAILABILITY:	Key measurements of each JAY seating product

JAY PRODUCT COMPARISON GUIDE

The “score” per product represents the relative ability of this product to address a clinical indication as described below.

The product comparison charts are for use only to compare a JAY product to another JAY product and should not be used to compare other manufacturers’ products.

The ratings should not be taken as indicators of how effective the product will be in addressing any specific users requirements.

CUSHIONS

Lateral Stability

The ability of the cushion to support the pelvis and maintain its current position as the upper body moves forward through the coronal plane, as well as its ability to assist in preventing the pelvis from sliding forward along the cushion during such activities as foot propulsion or weight shifting.

Forward Stability

The ability of the cushion to promote a neutral pelvis during an upper body forward motion as well as its ability to assist the pelvis maintain neutral as the upper body returns to its home position along the coronal plane.

Pressure Management

The ability of the cushion to distribute loads across the entire sitting surface and to conform to bony prominences while equalizing pressure in surrounding areas.

BACKRESTS

Accommodating Postural Asymmetries

The ability of the backrest to accept external devices such as (but not limited to) headrests, laterals, and anterior trunk supports that assist the cervical, thoracic, and, at times, the lumbar spine in maintaining midline along all planes.

Modular Design to Accommodate Evolving Presentations

The ability of the backrest to accommodate external hardware, foams, or fluid pads that increase surface contact along a user’s thoracic and lumbar spine to maintain midline in coronal and sagittal planes.

The ability of the backrest’s mounting hardware to move along both the transverse and coronal plane and maximize the backrest’s surface contact area with the user.

Lateral Stability

The ability of the backrest in its standard configuration (without the addition of external lateral supports) to assist the thoracic and, at times, the lumbar spine in maintaining midline along the coronal and sagittal planes.

COMMON CLIENT CHARACTERISTICS

Evaluating Skin Integrity

In the “Common Client Characteristics” section, we address the individual’s relative risk for skin breakdown. In order to simplify, we have categorized these into three weighted risks: Low risk, Moderate risk, and High risk. Below we define these categories based on the Human Risk Factors listed.

RISK FACTORS FOR SKIN	
Primary Factors	
• Presence or history of skin breakdown or damage on the sitting surfaces	
• Cannot or does not perform functional weight shifts for any reason	
Secondary Factors	
• Protruding bony prominences on the sitting surfaces	
• Impaired or absent sensation on the sitting surfaces	
Contributing Factors	
• transfer activities	• excessive body heat
• muscle atrophy	• incontinence or excessive sweating
• aging skin	• disease (e.g. diabetes, cancer)
• orthopedic deformities	• poor nutrition
Forces or conditions that can lead to skin breakdown	
• Pressure, shear, friction, moisture, heat	

An individual may be at **HIGH RISK** for skin breakdown if found upon assessment to present with one or more of the following:

- a primary risk factor
- one or more secondary risk factors in combination with a number of contributing factors
- may score 6-12 on the Braden scale for predicting pressure sore risk
- Waterlow 15+

An individual may be at **MODERATE RISK** for skin breakdown if found upon assessment to present with one or more of the following:

- no primary risk factor
- a combination of secondary and/or contributing risk factors
- may score 13-18 on the Braden scale for predicting pressure sore risk
- may score 8-14 on the Waterlow

An individual may be at **LOW RISK** for skin breakdown if found upon assessment to present with one or more of the following:

- no primary or secondary risk factors
- some contributing risk factors
- may score 19-23 on the Braden scale for predicting pressure sore risk
- May score 5-8 on the Waterlow

TECHNICAL SPECIFICATION MEASUREMENT GUIDE

Below we describe the way each type of measurement has been taken in order to have consistent comparison across the product line.

CUSHIONS

- Width:** Measured across the front of the cushion, at its widest point
- Depth:** Measured from the front to the back of the bottom of the cushion, at its longest point. (*If back post notches are present the Depth is measured to the front edge of the backpost notch.)
- Height:** Measured from the center of the femoral trough, where the femurs are loaded
- Weight:** Based on the cushion size listed in the Technical Specifications section for each product

BACKRESTS

- Width:** Measured across the shell at its widest point
- Height:** Measured from the top of the shell to the bottom, at its center
- Depth:** Measured from the center point on the inside of the back shell to the "edge" of a dotted line from widest point to widest point.
- Weight:** Based on an 18" wide x 18" tall backrest

BACKREST HARDWARE

- Angle Adjustability:** The angle measured from the back's forward-most position to its rearward most position, measured from the top of the back
- Width Adjustability:** Measures the difference between the back shell width and the width of wheelchair back canes it can accommodate. i.e. A 16" wide JAY® J3™ back can be mounted on a wheelchair as wide as 18". It's width adjustability measurement is therefore 2".

JAY YOUR WAY MODIFICATIONS

In this guide, the size availability charts list standard sizes available as well as sizes available through JAY Your Way. JAY Your Way is a modification program designed to individualize JAY products. From clinical improvements to colored covers, JAY Your Way can be used to create cushions and backs manufactured to users' unique individual needs. Personalised opportunities are highlighted throughout this catalog. For more information on ordering a modification please visit the JAY Your Way product page on our website.

JAY BASIC

The JAY® Basic cushion is a soft, mildly contoured durable foam base designed for the client at very low risk of skin breakdown, who requires mild stability.

JAY SOFT COMBI™ P

The JAY® Soft Combi™ P cushion is a lightweight, soft and mildly contoured foam cushion designed for the client at low risk of skin breakdown, who requires mild to moderate postural support.

Common Client Characteristics

- May be at very low risk of skin breakdown
- May have mild positioning needs
- May require a comfortable seating surface
- May be in a wheelchair for limited periods of time

JAY EASY™

The JAY® Easy™ is a skin protection and positioning cushion composed of a high-resiliency foam base, built-in lateral and medial thigh supports that can accommodate a curved or flat seating surface, and JAY® Flow™ fluid tripad.

Common Client Characteristics

- Maybe at moderate to high risk of skin breakdown
- May have moderate positioning requirements
- May have mild asymmetrical posture
- May be in a wheelchair for extended periods of time
- Required lower profile cushion
- Requires lighter weight cushion

Component	Feature	Design Intent	Clinical Value
BASE	Pre-contoured, high-resiliency foam	Provides positioning of the pelvis and thighs	Encourages improved orthopedic alignment via a soft foam base
	Optional curved bottom	Reduces "hammocking" effect of seat upholstery	Provides a level base of support which promotes proper pelvic alignment
INSERT	JAY® Flow™ fluid tripad 1.5" fluid immersion enclosed in cover.	Consistently ensures proper fluid placement by reducing fluid migration	High pressure relief in low weight profile cushion.
COVER	Moisture resistant cover	Protects foam base from moisture build up	Helps with incontinence management
	Non-slip bottom surface	Keeps cushion located properly	Reduces misalignment during use and promotes safe transfers

The JAY® X2™ is a lightweight foam cushion designed for the active client at moderate to high risk of skin breakdown, who requires mild to moderate positioning. The soft foam base allows the client to sit at the front of the cushion comfortably.

Common Client Characteristics

- May be at moderate to high risk of skin breakdown
- May be able to perform independent weight shifts
- May have moderate positioning needs
- May be in a wheelchair for extended periods of time
- Requires lower profile cushion
- Requires flat surface under thighs

JAY FUSION™ WITH CRYO

JAY® Fluid with Cryo Technology is a patent-pending, revolutionary wheelchair cushion material that actively cools a patient's seated skin surface for up to 8 hours* while evenly distributing pressure, reducing shear, and lowering the risk of moisture.

Common Client Characteristics

- May be at high risk for skin breakdown due to seat surface interface temperature, humidity and moisture
- May be at high risk for skin breakdown due to pressure
- May have changing postural needs over time
- May have aggressive positioning needs
- May be in wheelchair for extended periods of time

LOWZONE^{ECO}

The JAY® LowZone Eco is an entry level pressure reducing foam cushion with its any-way-up Visco elastic memory foam that distributes weight evenly across the seated area.

Technical Specifications

Waterlow	0 - 8
Size	17" x 17" 18" x 16"
Height	3"
Weight Capacity	114 kg
Cover Type	Wipedown

Product Code
LZEXXX33B

High performance foam
any way up

Superb stability

LowZone Eco Rating Scale

LOWZONE[®] Gel SWITCH

The JAY[®] LowZone Gel Switch is the any way up gel cushion that offers pressure reduction using gel below a visco elastic layer of foam.

- Switch is what it does- can be used any way around
- Benefits from foam and gel working together to reduce pressure
- Slow moving gel consistency prevents migration

Technical Specifications	
Waterlow	<17
Size	17" x 17"
	18" x 16"
	20" x 18"
	22" x 18"

	Whitmyer® head support options	Provide posterior and lateral support of the head and neck	Increase visual orientation and improve speech, digestion, and respiratory function
	Lateral thoracic supports available with fixed, swing-away, or offset hardware and curved or flat pads	Provide lateral thoracic stability and positioning	Promote proper postural positioning and help prevent development of asymmetrical postures while encouraging a greater level of independence

JAY J3™

The JAY® J3™ backrest product line offers a multitude of width, height, and contour depth back shells to fit the back to the user. Each back is lightweight and adjustable, with numerous hardware choices allowing for easy installation.

Aluminium Shell

- Strong and durable
- Pick the contour to match postural needs

Carbon Shell

- Same strength as aluminium shell but 60% lighter
- Offered with shallow contour

Jay J3 Carbon Back

Common Client Characteristics

- May require maximum posterior pelvic stability
- May require mild to maximum lateral stability
- May require moderate spinus process protection
- May require an open back angle to encourage trunk extension and visual orientation
- May require quick and easy removal of back shell from wheelchair
- May require mounting surface for head support
- May require additional positioning components (Spine Align)

Component	Feature	Design Intent	Clinical Value
SHELL	Five contour designs. Options include Posterior (PA), Posterior Lateral (PL), Posterior Deep (PD), Posterior Deep Lateral (PDL) and Posterior Deep Contour (PDC).	Provide posterior pelvic and lateral thoracic stability	Promotes proper postural positioning and helps prevent development of asymmetrical postures while encouraging a greater level of independence
	Up to 4 support heights and shapes dependent on contour shell selected. Options include lower thoracic, mid thoracic, upper thoracic or shoulder height.	Offers appropriate trunk support for a wide range of user torso heights and levels of injury	Promotes proper level of support based on client's functional needs and necessary trunk stability
	Optional Heavy Duty shell with 227kgs weight capacity	Provides posterior pelvic and lateral thoracic stability	Promotes proper postural positioning and helps prevent development of asymmetrical postures while encouraging a greater level of independence
	Carbon Fiber shell	Provides a lighter weight option to complement ultra lightweight wheelchairs	Reduces overall weight of mobility system for increased propulsion efficiency
FOAM	1.5" thick, soft foam insert	Enhances comfort and distributes pressure	Increases sitting tolerance and reduces risk of skin breakdown
HARDWARE	4 Hardware options. RH-2-point option, optimized for use with ultra lightweight wheelchair. SH-standard 2-point option. TH-2-point option, optimized for the use with tilt-in-space wheelchairs. 4-Point-4-point, heavy duty	Offer angle and width adjustability for a wide range of chair configurations and user needs	Increase visual orientation, and improve digestion and respiratory function
INNER COVER	Optional moisture-resistant inner cover	Protects foam from moisture build-up and is easy to clean	Increases user comfort and sitting tolerance
OUTER COVER	Microclimatic with 3DX™ Spacer Fabric and Lycra® stretch outer layer (additional options available through JAY® Your Way)	Dissipates heat and moisture and provides a smooth sitting surface	Reduces risk of skin breakdown and increases user comfort and sitting tolerance
ACCESSORIES	Spine Align posture conforming inserts	Allow proper adjustment in the field to accommodate clients unique and changing needs	Contour to individual shape and maximize loading surface
	CradleU Adjustable Fixed Lateral (fixed and swing-away lateral supports also available)	Adjusts the contour of the back to provide lateral thoracic stability and positioning for clients presenting with postural deviations or asymmetries	Promotes proper postural positioning and helps prevent development of asymmetrical postures while encouraging a greater level of independence
	Whitmyer® head support options	Provide posterior and lateral support of the head and neck	Increase visual orientation and improve speech, digestion, and respiratory function

JAY FIT 2U™

The JAY® FIT 2U Back was designed for individuals who require a more complex seating solution, when an off-the-shelf back cannot accommodate an individual's orthopedic asymmetries, or when a molded back cannot accommodate changes. Combined with the JAY GS Cushion it makes an excellent solution for growing and changing needs – ideally for paediatric clients.

OPTIONS AND ACCESSORIES

Please see the product pages for detailed standard availability.

COVERS

The following cover options are available on select products through the JAY Your Way modification program.

SEALED INNER COVER

- Designed to be used underneath outer JAY® cover
- Stretchable Lycra® reduces surface tension
- Polyurethane coating is easy to wipe off and clean
- Aquaguard zipper and anti-wicking seam thread prevent moisture from damaging the foam base

JAY STRETCH ZIPPER COVER

- Pleated, 4-way Stretch material reduces surface tension
- Zipper provides a secure fit and protection for the foam base

INCONTINENT RESISTANT SHOWER CAP OR ZIPPER COVER

- Semi-plastic coating can be wiped off and dried to prevent moisture build-up
- Semi-plastic coating prevents moisture from damaging the foam base
- Shower Cap edge makes cover easy to remove
- Zipper provides a secure fit and protection for the foam base

IONIC COVER WITH BREATHABLE SPACER FABRIC

- Silver-impregnated material inhibits bacterial growth
- 4-Way stretch reduces surface tension
- Breathable Spacer Fabric promotes airflow

DARTEX® COVER WITH AQUAGUARD™ ZIPPER

- Cloth surface prevents sliding
- 4-Way Stretch reduces surface tension
- Dartex® coating and Aquaguard zipper prevent moisture from damaging the foam base

REVERSE DARTEX® COVER WITH AQUAGUARD ZIPPER

- Water-resistant Reverse Dartex® coating is easy to wipe off and clean
- 4-Way Stretch reduces surface tension
- Aquaguard zipper prevents moisture from damaging the foam base

ACCESSORIES

JAY LUMBAR SUPPORT

- Provides mild support of the lumbar spine
- Helps reduce lower back fatigue and increase sitting tolerance

JAY SOLID SEAT

- Improves posture by providing a firm, fully adjustable base of support
- Drop seat option
- Includes mounting hardware

OPTIONS AND ACCESSORIES

Please see the product pages for detailed standard availability.

BACK HARDWARE

TWO-POINT/SH

- One attachment point on each back cane
- Simple and quick installation
- Angle height & depth adjustable
- Quick release

RH / RHF*

- One attachment point on each back cane
- Lightest hardware solution (quick-release)
- Angle height & depth adjustable
- Quick-release and fixed options available

TH*

- One attachment point on each back cane
- Angle height & depth adjustable
- Lengthened bracket and pin accommodate heavier users or clients with high tone
- Perfect complement for tilt-in-space wheelchairs

*Available exclusively on J3 Back.

FOUR-POINT

- Two attachment points on each back cane
- Withstands greater force and weight by distributing it across a wider area
- Provides rigid mount to wheelchair
- When combined with a Heavy Duty back shell, accommodates increased weight capacities
- Angle height & depth adjustable

STRAP

- One strap on each side
- Cloth straps click around back posts for easy installation
- Used with the wheelchair's back Upholstery

LATERAL SUPPORTS

FIXED

- Provides customized lateral thoracic support
- Width and height adjustable

SWING-AWAY

- Provides customized lateral thoracic support
- Width and height adjustable
- Swing-away hardware allows for easy transfers out of the wheelchair

ANGLE-ADJUSTABLE SWING-AWAY

- Provides customized lateral thoracic support
- Width and height adjustable
- Swing-away hardware allows for easy transfers out of the wheelchair
- Angle adjustability provides the most precise shape to match the user's posture

CRADLE U™

- Provides customized lateral thoracic support for clients with postural or spinal deviations
- Adjusts the existing contour of the JAY J3 back to match the client's unique shape
- Intuitive design attaches directly to the back shell beneath the foam
- Support plates adjust in angle to match the user's torso

JAY POSITIONING SUPPORTS

For specific positioning needs, choose from JAY's portfolio of Positioning Supports to complement your JAY cushion and back.

HEAD Positioning

Head Supports using our portfolio of Whitmyer™ Headrests provide posterior, lateral, and occasionally anterior support of the head and neck for clients who may have difficulty maintaining an upright head posture or are using tilt-in-space wheelchairs. Options include numerous pad styles and configurations, six mounting hardware styles, and three cover materials for thousands of possible headrest configurations to meet your client's needs.

PELVIC Positioning

Pelvic Positioning Belts help encourage and maintain a stable and aligned pelvis, which impacts the positioning of the entire body. Options include varying styles and sizes, single- or dual-pull adjustments, and push button or side release buckles for ease of use.

UPPER BODY Positioning

Anterior Trunk Supports encourage an upright posture and support the torso for improved respiratory function, head positioning, and upper extremity control. Options include six support styles and either structured or dynamic construction.

LOWER BODY Positioning

Shoe Holders help maintain positioning of the feet and ankles, broadening the seating "footprint", and improving overall posture.

Hand & Arm Supports help maintain a comfortable and optimal position of the hands and arms for improved upper body posture and head control, and reduce the risk of skin breakdown.

Foot Boxes reduce the risk of skin breakdown and/or client injury that may result from periods of high tone or continual contact with the hangers and footplates.

GLOSSARY OF TERMS

The following is a glossary of terms that will aid in understanding terminology used in the rehab field and in this JAY catalog.

Activities of Daily Living

Daily activities performed by an individual in the home and/or outdoor environments. The ability or inability to perform these activities is commonly used as a means to measure an individual's function.

Anthropometric Data

Relating to the measurement of the size and proportions of the human body. Used in seating technology to determine foam firmness as it relates to cushion width.

Bony Prominence

Area of body where bone is projected. Common sites for soft tissue breakdown. May include the coccyx, ischial tuberosities or sacrum.

Bottoming Out

A condition that occurs when a client's tissue under the bony prominence displaces or compresses through the pressure-relieving material to an underlying hard surface.

Braden Scale

A validated risk assessment tool used to identify individuals at risk to develop pressure sores.

Coccyx

Commonly referred to as the tailbone, the coccyx is the lowest point of the vertebral column.

Decubitus Ulcer

(also referred to as pressure sores or bedsores)

A skin lesion caused by such factors as unrelieved pressure, shearing, humidity, etc., most commonly seen over bony areas such as the ischial tuberosities. Decubitus ulcers are often preventable and very difficult to treat.

Immersion

The ability of the user to sink into a sitting surface for optimal pressure distribution and stability without increasing surface tension.

Ischial Tuberosity

Two bony prominences (seat bones) in the buttocks.

Lateral Thigh Support

Helps prevent high excessive or unwanted abduction of the hips or provides a counterpoint for control of hip external rotation.

Lateral Trunk Support

Helps provide lateral support to the thoracic spine.

Medial Thigh Support

Helps maintain the hips of the seated individual in a prescribed amount of abduction or prevents adduction of the hips.

Pelvic Loading Area

(also referred to as PLA, OptiWell, or well)

The pre-contoured area of a cushion where the pelvis is immersed. The Pelvic Loading Area, or well, is important for pressure distribution and positioning.

Pelvic Obliquity

One side of the pelvis is lower than the other.

Pressure

Force/area.

Posterior Pelvic Tilt

Backward tilting of the top of the pelvis.

Sacrum

Lowest section of the spine, includes the coccyx and posterior aspect of the pelvis.

Scapula

The flat, triangular bone in the back of the shoulder (shoulder blade).

Shear

Friction that occurs when skin slides along the surface of a cushion. This Irritation can result in skin breakdown.

Sitting Tolerance

The ability of an individual to remain in a comfortable seated position. Discomfort and pain can reduce sitting tolerance.

Thoracic Kyphosis

The outward curvature of the thoracic spine.

Trochanter

The bony prominence in the upper femurs where the hip connects with the pelvis.

PRODUCT DESIGN TERMS

Foam Density

Measured by pounds per cubic foot (PCF), foam density influences its durability. Regardless of foam firmness (or spring) it's important that density remains above 2.5 PCF for proper durability.

Foam Firmness

The spring back property of foam. Also referred to as IFD (Indentation Force Deflection), foam firmness is unrelated to its density.

Firmness Layering

The use of multiple layers of materials with varying firmness to change a cushion's ability to distribute load. A common form of firmness layering is to use a firmer material under the thighs and a softer material under the ischial tuberosities to redistribute the load to the thigh region, helping to reduce the chance of tissue breakdown under the ischial tuberosities.

Hydrostatic Force

A force that is in balance or equally distributed. Hydrostatic forces occur in objects that immerse in fluids (liquid or gas). That is why people say they feel weightless when floating in water. Hydrostatic loading evenly distributes pressure to reduce buildup under sensitive areas of the pelvis which helps prevent decubitus ulcers. Because it is impractical to sit in a bowl of water, fluids (liquid or gas) must be held in a closed container. It is imperative that these containers be flexible and deep enough to easily reshape (allowing displacement) to accommodate the contour of the pelvis. If a fluid can't displace, it won't hydrostatically distribute the load.

Microclimatic Material

Microclimatic material is a material that encourages the passage of air, heat and water vapor away from the user. Tissue breakdown has been attributed to excess heat and moisture.

Positioning Capability

The creation of a shape by using one or a combination of the following techniques; pre-contouring, modifying the cushion material, adding or subtracting components, or controlling the volume and location of fluid. Without the ability to properly position, users who have either flexible or fixed postural abnormalities are at risk for increased skeletal problems.

Pre-contouring

The removal or reshaping of material to create a new shape that encourages distribution of seated pressure by matching the contours of the human body. Pre-contouring encourages distribution of seated pressure, offers stabilizing capabilities, increases comfort and sitting tolerance and can prevent the formation of decubitus ulcers.

Pressure Distribution vs. Peak Pressure Reduction

Pressure distribution is the act of evenly distributing, or equalizing, pressure over the entire sitting surface or contact area. Peak pressure reduction is the act of reducing pressure from at risk areas of the body that tend to bear the majority of the body's load, such as the ischial tuberosities or scapula.

Segmentation

Segmentation is the division of a material into segments to reduce tension within the material. Without segmentation, material tension prevents the pelvis from properly immersing into a material such as foam, gel or an air bladder. Segmentation allows these materials to better conform to the shape of the user, which effectively reduces peak pressures.

Stability

Stability is a cushion's ability to provide both lateral and forward stability. Poor postural stability can easily lead to:

- Skeletal deformities such as kyphosis, scoliosis, and lordosis.
- A poor hip position that compromises the pressure-relieving properties of the cushion.
- The increased likelihood of falling out of a seat or being unable to return to upright.

Tension Reduction

Tension is the state of being stretched or strained. It is important that cover materials do not hinder the ability of the user to immerse into the cushion or back material, as proper immersion, increases contact area and helps reduce peak pressure areas. Segmented foam and fluid containers also aid in tension reduction.

JAY® Your Way is a modification program designed to deliver the benefits of modified seating with the ease of ordering standard JAY products.

From clinical improvements to colored covers and shells, JAY Your Way modifies cushions and backs specifically to address unique individual needs and preferences.

Common modifications for cushions, fluid inserts, covers, backrests and positioning products can be ordered simply, and most modifications are made at no additional charge.

With JAY Your Way, JAY products are easily modified to meet your clients' needs and individual styles.
